

# ARE YOU 20/20?

Don't stop there! 20/20 means what a person with normal vision sees at 20 feet, but having healthy vision is so much more than mere numbers.

## Why you need an annual eye exam...

Eye exams are more than just checking your vision. Better vision and the overall health of your eyes are significant factors in your total health and wellness. Vision testing is the beginning step to assessing your vision and detecting potentially harmful conditions before they become more serious, impacting your sight and your life.

Just as it is important to visit your medical doctor for a yearly check-up, it is equally important to have routine eye examinations with your eye care specialist. Certain medical conditions such as diabetes and high blood pressure, may require you to see your eye doctor more frequently, to ensure your vision is not decreasing due to your physical health.

**SNEAD EYE GROUP** suggests that you make good vision as much a part of your health plan as you would your scheduled visits to your primary care doctor or dentist.

**Healthy vision promotes a healthy lifestyle.**
