WASTE HIERARCHY

Lee County follows the Environmental Protection Agency's waste management hierarchy to sort and utilize every piece of waste material in an environmentally safe, reliable and efficient manner.

Thanks to you!

All about your
WTE FACILITY

LEE COUNTY'S OWN

ENERGY SOURCE

The Lee County Integrated Solid Waste Management System has been widely recognized as one of the most sustainable systems in the country.

Our Waste-to-Energy facility (WTE) plays an integral part in the success of this system and **it's because of Lee County residents' support that makes it all possible.**

A FACILITY RENOWNED

Government officials from around the United States and the Caribbean have toured the Buckingham Campus as they research new methods for handling their own waste stream.

SAFE, ECONOMICAL, CLEAN & RENEWABLE

Utilizing the waste-to-energy process allows Lee County to reduce the volume of waste sent to the landfill by 90 percent.

Your waste is powerful!

 of solid waste processed at the WTE facility
1,836 TONS PER DAY

//////// that generates //////////

60  of clean, renewable
MW ENERGY

●●● making enough to ●●●

 continuously power
30,000 HOMES

PREPARING FOR A BRIGHT FUTURE

As Lee County continues to see extensive growth in population, the waste generated greatly increases along with it.

It's important that we are always planning for growth and expansion of our integrated solid waste management system and that includes the WTE facility in Buckingham, and with your support we'll continue to lead the country in producing energy from waste.
