2012 TRAFFIC COUNT REPORT

Introduction

This report is intended to provide the user with information concerning the traffic volumes on major roadways in Lee County from January 2012 through December 2012, and with historical data that may be useful in estimating future traffic volumes.

Traffic characteristics at permanent count stations are detailed with monthly, daily, and hourly factors where available. Periodic Count Locations were each counted for a 72 hour period once during the year.

Lee County DOT operated 61 permanent count stations and counted at 53 periodic count sites in 2012. Five permanent count stations were not operational for the entire year due to construction or equipment failures and had no or partial data.

Traffic count data was processed by Midwest Solutions consulting group. Average Annual Daily Traffic at tube count locations were calculated using nearby count stations to develop daily and monthly factors. Average Annual Daily Traffic at permanent count stations were developed by dividing total volume by number of days data was collected. Traffic count details are available at <http://www.ms2soft.com/tcds/tsearch.asp?loc=Lee&mod=>.

Construction Activity

Roadway construction, especially major projects, can affect traffic flow and driving patterns for many miles from the project site and on many roads other than the one under construction. Although traffic counts are not collected in areas actively under construction, counts nearby may have been affected by the construction. No judgment is made on how much impact, if any, the construction may have had on a particular count. The user of these data should be aware the impact construction activity has on travel patterns. Users of this report should use their professional judgment to determine the applicability of these data to the study being performed.

Permanent Count Station Data

Permanent Count Station Data

The following is a summary of the traffic characteristics at each of the 61 permanent count stations used to factor the periodic count locations in Lee County. The user may find this information helpful in interpreting raw traffic counts that may be collected for specific applications.

Construction activity and equipment failures may have caused some permanent count stations to produce inadequate data at various times. Where no monthly factor is available for the current year, a monthly factor from a previous year was used to adjust the raw data to estimate the AADT for periodic count stations. If an entire year's data are not available, use the factors and directional split data provided with caution.
