PART III: EVALUATION CRITERIA

1. Project Name: As listed in the Inlet Management Plan (IMP) or Strategic Beach Management Plan (SBMP)

Blind Pass (Lee County) Bypassing

2. Project Description: Include county, location with reference to FDEP range monuments, brief project history, and description of proposed activities. Note: The box will expand as needed. To expand for printing purposes, click anywhere outside the box when complete.

Blind Pass is located in Lee County on the southwest coast of Florida connecting the Gulf of Mexico with Pine Island Sound. The inlet separates Captiva Island to the north and Sanibel Island to the south. Lee County maintains Turner Beach Park, immediately north of Blind Pass on Captiva Island, and a bridge crossing Blind Pass, which provides the only vehicular access to Captiva Island from Sanibel Island and the mainland. Blind Pass has had one of the most complicated geomorphological histories of any Florida inlet, which has seen multiple closures and openings over time.

The Department and Lee County sponsored a study in 2017-2018, to update the inlet's sediment budget and develop improved strategies for maintaining a more stable inlet while addressing chronic erosion conditions of northern Sanibel Island. This study included a literature review, data collection, development of a sediment budget, and an inlet management alternatives analysis with advanced numerical modeling to develop feasible inlet management strategies. Conceptual designs were evaluated individually and in combination employing the numerical model Delft3D. Study guidance was provided by a Technical Advisory Committee made up of representatives of Lee County, the City of Sanibel Island, the Captiva Erosion Prevention District, and the Department.

A comprehensive analysis was conducted of preliminary alternatives, which included various options involving beach fill, deposition basins, channel dredging, changes to the Captiva Island terminal groin, constructing various structures on northern Sanibel Island, adding a spur to the existing terminal groin, and conducting no action. Following this analysis, the most effective and feasible components of the preliminary alternatives were combined into three final alternatives for further study. These final alternatives included combinations of a truncated entrance channel dredge template, dredging connections to Pine Island Sound, placing beach fill on northern Sanibel Island, and adding a spur structure to the west end of the existing terminal groin on Captiva Island. Morphology, volumes, channel stability, and storm response were evaluated. While morphological trends were similar and benefits comparable for each final alternative, there were some differences in magnitude of changes. The final study recommendations were affirmed in the IMP adopted August 2019 which calls for the following: comprehensive monitoring; truncated seaward dredge template; Sanibel Island beach fill between R110.5 and R116 bypassing an average of 21,000 cubic yards per year; modified connections to Pine Island Sound with a re-established connection to Sunset Bay and Wulfert Channel extension; shore parallel spur at Blind Pass terminal groin.

This funding will implement bypassing as recommended. The channel will be excavated as suggested by the monitoring indicating approximately 91,500 cubic yards of material have infilled the design template as of August 2020. Truncation of the seaward dredge limit will be implemented as well as a request for a permit modification to adjust the permitted beach template to fill between R110.5 and R116.

3. Use of Requested Program Funds: Provide a brief description of tasks to be completed in each requested phase (Feasibility, Design, Construction, and/or Monitoring). Indicate which tasks are cost reimbursement, if the work has already been completed.					
Design - Modification of previously issued FDEP and USACE permits to allow bypassing from R110.5 through R116.					
Construction - Completion of plans, specs, and construction drawings; bid services; implementation of bypassing with all permit required conditions and environmental monitoring and controls; construction inspection and completion certification; one year of post-construction monitoring (physical, turtle, bird, seagrass).					
4. Map: Provide as an attachment to the application. The map of the project area must be formatted at a minimum of 1" = 200' scale					
Map elements must include: · Compass rose with North arrow, scale, and legend. · Project boundary, including the location of the inlet and length of critically eroded shoreline · FDEP range monuments · Area of inlet influence · Permitted sand bypassing placement area					
5. Project length: Total restored project boundary (in feet) as listed in the IMP or SBMP 5,625'					
 6. Schedule and Budget: Cost Reimbursement: Specify eligible costs incurred during the three years prior to the current application's fiscal year that have not been reimbursed. Eligible costs will be included in the funding request for the current application. Current and Future Costs: Specify eligible costs for the current application's fiscal year that are not in a current DEP agreement an have not been reimbursed. Include the estimated costs for the next 5 years and the proposed phases for the next 10 years.

7	Cand	4000	h:	مطه	inlat
7.	Sand	reac	nıng	ıne	miet

Provide the estimated annual quantity (cubic yards) of beach quality sand reaching th	e
updrift boundary of the improyed jetty or inlet channel:	

8. Severity of erosion

What is the annual bypassing objective (cubic yards/year) adopted by the IMP or SBMP or as determined by a Department-approved study?

,000		
,000		

9. Balancing the sediment budget

What is the current annual average of bypassed material (cubic yards) since the adoption of a bypass objective?

n/a	
-----	--

Provide a brief description of when the last sediment budget engineering analysis was completed for the inlet and area of inlet influence. Discuss any proposals to update the sediment budget. The 2018 inlet management study for Blind Pass developed an updated sediment budget covering the time period from 2009 to 2015. Along the study area, the predominant direction of longshore sediment transport is from north to south. During the time period from 2009 to 2015, approximately 51,000 cubic yards per year of sand were transported from Captiva Island southward to Blind Pass. Northern Sanibel Island south of Blind Pass sustained an annual loss of -14,000 cubic yards of sand between R110.5 and R112, and another -58,000 cubic yards annually between R112 and R116. The sediment budget indicates that the inlet complex captures 21,000 cubic yards of sand per year.

Historical bypassing volumes: In the table below, provide the annual bypassing volumes (cubic yards/year), for the previous ten years (from the last calendar year or the most recent calculation). Attach additional documentation as needed.

Year	Quantity Bypassed (cy) - Sand Transfer Plant	Quantity Bypassed (cy) - Dredging	Dredge Location	Placement or Disposal Area

RESOLUTION NO. 20-11-11

A RESOLUTION OF THE BOARD OF COUNTY COMMISSIONERS OF LEE COUNTY, FLORIDA, APPROVING AND SUPPORTING THE PROPOSED ACTIVITIES AS OUTLINED IN THE 2021/22 LOCAL GOVERNMENT FUNDING REQUEST TO THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION AND AFFIRMING THE COUNTY'S COMMITMENT TO PROVIDE LOCAL FUNDING

WHEREAS, beaches provide vital economic, recreational, storm damage reduction, and environmental benefits, and

WHEREAS, Lee County has supported previous federal, state and local initiatives in correcting beach erosion problems throughout the County, and

WHEREAS, Lee County prepared and submitted a Long Range Beach Erosion Control Budget Plan (Budget Plan) in March 1997, and has annually submitted updated information in accordance with guidelines developed by the Florida Department of Environmental Protection, and

WHEREAS, Lee County seeks to update the Budget Plan for the next Florida Department of Environmental Protection Fixed Capital Outlay Legislative Budget Request, and

WHEREAS, Lee County supports the Florida Department of Environmental Protection's beach and coastal management programs in accordance with Section 161.101 and 161.161, Florida Statutes, and

WHEREAS, Lee County supports all components of the Budget Plan consistent with the Lee County Comprehensive Plan and agrees to fund the local government share of all County beach and inlet projects approved for funding by the Florida Legislature in Fiscal Year 2021-2022 through the existing dedicated tourism development tax revenues, special taxing units, or other funding resources as applicable, and

WHEREAS, Lee County agrees to serve as the local sponsor for all County projects identified in the Budget Plan.

NOW, THEREFORE, BE IT RESOLVED by the Board of County Commissioners, Lee County, Florida, that:

<u>Section 1.</u> Lee County is requesting state funding and providing its support for the Blind Pass Inlet Management Plan, Bonita Beach Nourishment, Estero Barriers Inlet Management Study, and the Lovers Key Nourishment Projects, and affirms its ability to provide the local match as necessary to implement state-funded beach and inlet projects as requested.

<u>Section 2</u>. The County hereby supports Project regionalization where possible to conserve sand resources and/or reduce project costs and will work with the Town of Fort Myers Beach to coordinate bidding and construction of the Estero Island Shore

Protection Project, Lovers Key Nourishment, and Bonita Beach Nourishment where possible.

Section 3. The County Manager or Deputy County Manager of the Lee County Board of County Commissioners is hereby authorized to execute change orders and amendments for existing and future grant agreements as previously approved by the Florida Department of Environmental Protection and Lee County Board of County Commissioners under the State of Florida Beach Management Funding Assistance Program that do not result in a change to the local cost share percentage or require a budget amendment resolution.
