BASIS OF AWARD

The basis of award for this bid will be the lowest responsive and responsible bidder overall (Sections 1 - 3) meeting all specification requirements. The vendor must bid on all areas in an area in order to be awarded.

Lee County reserves the right, at the procurement Director's discretion not to award certain items or areas.

Lee County reserves the right to reject unbalanced bids (a bid where normally low cost item is priced well out of the normal range).

All prices shall be totally inclusive of any and all costs to include but not limited to: labor, equipment, permits and incidentals necessary to perform the periodic maintenance of all roadway irrigation systems.

Lee County reserves the right to add or delete areas and services based on a mutually agreed price to be negotiated between the contractor and an authorized Lee County representative.

Lee County reserves the right to delete or cancel any site at the bid price.

PRICE ESCALATION/DE-ESCALATION

Offers are submitted with the understanding that no price increases will be authorized for 365 calendar days after the effective date of the contract. Upward price adjustments may be permitted only at the end of this period and only where verified to the satisfaction of the Division of Procurement as provided herein. **However, "across the board" price decreases are subject to implementation at any time and shall be immediately conveyed to the County.**

The awarded vendor(s) shall not give less than 30 days advance written notice of a price increase to the Division of Procurement. Any approved price change will be effective only at the beginning of the calendar month following the end of the full 30-day notification period. The vendor shall document the amount and proposed effective date of the change in price. The price change must affect all accounts serviced by the vendor. Documentation shall be supplied with vendor's request for increase which will: (1) verify that the requested price increase is general in scope and not applicable just to the County; and (2) verify the amount or percentage of increase which is being passed on to the vendor by others not under the control of the vendor. Failure by the vendor to supply the aforementioned verification with the request for price increase will result in delay of the effective date of such increase. The Division of Procurement may make such verification as deemed adequate. However, an increase, which the Division of Procurement determines is excessive, regardless of any documentation supplied by the vendor, may be cause for cancellation of the contract by the Division of Procurement. The Division of Procurement will notify using agencies and vendor in writing of the effective date of any increase, which is approved. However, the Vendor shall fill all purchase orders received prior to the effective date of the price adjustment at the old contract prices. The Vendor is further advised that price decreases that affect the cost of

materials, labor, and transportation are required to be passed on to the County immediately. Failure to do so will result in action to recoup such amounts.

DETAILED SPECIFICATIONS

- I. The contractor will not make any repairs to pump stations, 2-wire systems, decoders, solenoid valves, isolation valves, pressure reducing valves (PRV's), or the entire disc filter assemblies.
- II. The systems will be checked for the following items or conditions on a 36 day cycle. On inspection of a system if five (5) areas or less are found to be damaged the awarded vendor will make the repairs. Should the awarded vendor find more than five (5) areas damaged he must flag the damaged and report the damage immediately on his report. Please make sure any replacement parts are listed on the spreadsheet and invoice. (See Attached).
- 1) Bubblers and screens will be cleaned and replaced on the same tree or palm that they were removed from. If the water has high iron content and the actual bubbler becomes plugged then the bubbler and screen will be replaced with an identical bubbler of the same flow rate.
 - 2) All disc filters for the drip tubing shall be opened and cleaned manually. They shall then be reassembled and checked for leaks before going on to the next location. The pump station master valve (MV) shall be manually opened for this operation and the MV shall be set back to automatic upon completion of the cleaning and leak checks. Should any part of the disc filter be found to be defective it shall be reported to LCDOT on the irrigation maintenance report.
 - 3) All zones of irrigation will be run from the Hunter ACC irrigation controller to make certain that they are opening and closing properly. On the Tucor controllers, all zones of irrigation shall be operated and checked for leaks from a handheld device, be it a smart phone or tablet, while walking through each zone. The Tucor login and password will be supplied to the successful bidder. When repairs are required after checking the entire system, the pump station MV shall be set to the open position so that water can be run manually from each zone. The MV shall be set back to the automatic position upon completion of the repairs.
 - 4) LCDOT has the capability of sending a customized manual irrigation program to each ACC controller for maintenance purposes. However, the contractor must first decide where they would like to begin and end, and tell us how much time needs to be inserted between each zone if needed.
 - 5) All Netafim Flags shall be checked for operation and replaced as needed.
 - 6) The surface drip tubing shall be checked for leaks and repairs made as needed. The drip tubing beneath the sod shall be run for up to 5 minutes for each zone every to look for any leaks that may take longer to manifest themselves. A normal check of the subsurface drip shall be made to make certain that the zone is actually functioning.
 - 7) When major damage occurs to the drip tubing or a manifold that supplies the tubing, the zone shall be repaired and then cleaned by removing the flush valves at each end of the zone and running the zone for up to 2 minutes to remove the debris.
 - 8) The mainline flush valves, where applicable, shall be flushed for 3 minutes. They will be flushed one at a time for each system and care must be taken to avoid flooding the travel lanes on the roadway. If it is determined that flooding may occur, signs shall be placed at the appropriate spacing for on-coming traffic before any flushing occurs to alert all oncoming vehicles of the water hazard possibility in the roadway. The pump station master valve must be manually opened for this operation and the MV shall be set back to automatic upon completion of the cleaning and leak checks. The main lines may only be flushed at a rate that will not exceed the design criteria of the pump. Exceeding this rate will cause the

station to shut down. Keeping the pressure of the flow rate at 50 PSI and 60 Hertz will prevent this from happening in almost all instances.

- 9) On systems that contain overhead irrigation components, all rotors shall be checked for proper operation and adjusted so that they do not spray water onto any roadway, bike path, or sidewalk. Rotors shall be replaced as needed when not operating properly, broken, or leaking. All spray heads shall have the screens cleaned and or replaced as needed. They shall also be positioned so that they do not spray onto any roadway, bike path, or sidewalk. Spray heads shall be replaced as needed when broken or leaking.
- 10) Any zone of irrigation that will not operate from the irrigation controller will be reported to LCDOT within 24 hours of its discovery.
- 11) An irrigation maintenance report shall be completed with all of the pertinent details regarding the work and the parts used. This report shall be sent to us electronically within 48 hours of the completion of the work on that roadway. Failure to send completed reports, or habitually being late with these reports, will be grounds for non-payment or termination of your contract with LC/DOT.
- 12) If a break is reported to us regarding a mainline, you will have 48 hours from the time that you are informed to have the mainline repaired. The 2-wire path or multi-wire path will be located and kept safe before cutting into the mainline for repairs. We will inspect the wires before any back filling of the repairs can be completed to make certain that there are no nicks or cuts that could affect the communications between the controllers, decoders, or solenoids.

III. Maintenance of Traffic

- 13) Proper MOT shall be set up previous to beginning any work on a roadway. Use the FDOT Design Standard 600 latest edition to be certain that you and the motorists will all be safe.
- 14) There will always be an individual onsite that is certified in MOT by FDOT.
- 15) Advanced warning signs may not be mounted on stakes or posts due to the presence of surface or sub-surface installed drip tubing. They can be on mounted 40lb rubber base, rigid holder, or spring system sign stands. All signs shall be 48" x 48".
