You can **configure and price a full range of products** using the tables and rules shown in this book.

The simplified structure of pricing and product data in this book creates an easier configuration experience and a quicker update process for future price increases. Pricing logic used in this format makes the product and price easier to understand and has enabled Allegion to provide customers with a **digital data set of pricing, available for download at** <http://360portal.allegion.com>.

As a result, the **How to Order formats have been updated to match the Allegion Catalog Nomenclature (ACN) logic**. ACNs are descriptive, unique identifiers that set standards on how to order products and require default, consistent naming conventions for all product attributes across Allegion brands.

APPLICATION NOTE FOR 2' DEVICE

Available on Surface and Concealed Vertical (panic and fire).

When vertical rod devices are used on both doors of a pair, operation of the inactive door (smaller door) will not disengage the active door, creating a potential safety issue for those using the inactive door during an emergency. In addition, standard hex or cylinder dogging is not available. If dogging is required, special center case dogging is available for 98/9927/47/49/50WDC devices. Prefix device with "SD". For pairs of doors using one 2' door Von Duprin recommends the following hardware combinations listed below for optimum safety in an emergency.

Surface or Concealed Vertical device on the 2' door (inactive) and a mortise device on the larger door (active). This combination is used primarily on Hollow Metal door applications only.

Automatic Flush Bolt on the 2' door (inactive) and a Surface or Concealed Vertical device on the larger door (active).

The 2' door width is not available with any electrical, Chexit, hurricane or windstorm options.

WARNING: Double cylinder options (2/2SI) are ideal for fire exit hardware and panic hardware that is not equipped with the dogging feature. Combining a double cylinder option with the dogging feature is not recommended, as the hardware could be in the dogged (unlatched) position when the indicator states a locked position.

APPLICATION NOTE FOR 2' DEVICE

Available on Surface and Concealed Vertical (panic and fire).

When vertical rod devices are used on both doors of a pair, operation of the inactive door (smaller door) will not disengage the active door, creating a potential safety issue for those using the inactive door during an emergency. In addition, standard hex or cylinder dogging is not available. Dogging is not available for this application on 33/3527A/47/49A/50A-WDC devices.

For pairs of doors using one 2' door Von Duprin recommends the following hardware combinations listed below for optimum safety in an emergency.

Surface or Concealed Vertical device on the 2' door (inactive) and a mortise device on the larger door (active). This combination is used primarily on Hollow Metal door applications only.

Automatic Flush Bolt on the 2' door (inactive) and a Surface or Concealed Vertical device on the larger door (active).

The 2' door width is not available with any electrical, Chexit, hurricane or windstorm options.

## CUSTOM WIRING DIAGRAMS

When common wiring diagrams do not meet the needs of the job requirements, Allegion offers a service to purchase custom wiring diagrams. All custom wiring diagrams include a point-to-point drawing, a riser diagram, and a detailed theory of operation. Custom wiring diagrams fall into two categories; Standard and Complex.

- **Standard drawings:** All Allegion products with a single opening and a basic theory of operation. These drawings will be quoted a NET \$346.00 for each drawing.
- **Complex drawings:** Generic contacts, 3rd party components, complex relay logic, timer circuit logic, any other additional advanced logic. For United States, drawings that fall under this type will receive a NET quote depending on the time required to complete the drawings at an hourly rate of \$346.00/hour with a \$346.00 minimum NET.
