

Lee County's Integrated Waste Approach

We Look For Options Other Than Landfill Disposal

Waste-to-Energy

An established large-scale technology that reduces the volume of post-recycled waste while complementing other recycling programs.

Household Chemical Waste

Residents can drop off unwanted household items such as latex paint, pesticides and other chemicals at the drive-through location.

Construction and Demolition

Allows residents and businesses to recycle large materials and comply with County recycling ordinances.

Recycling

Curbside paper, plastic, glass and metals are processed at our recycling facility and turned into valuable commodities.

Compost and Mulching

Award-winning OrganicLee® soil amendment is produced from your recycled yard trash and processed biosolids from local plants.

In 2025, Lee County ranked second statewide with a recycle rate of 87%.
